

Satisha Suryanarayana

| DevOps | SRE | Automation | Observability|

Phone: +31 619263846 | Email: ssatisha@gmail.com | satishas

PROFILE SUMMARY

- DevOps and Site Reliability Engineering (SRE) professional with over 15 years of experience across Azure, AWS, Kubernetes, infrastructure automation, threat management, and observability.
- Experience in defining SLIs/SLOs, MTRR, managing error budgets, driving incident management, Change-Management and Incident postmortems.
- Proven track record of modernizing legacy VM platforms to containers, automating database deployments with SQL-Runner, and executing infrastructure decommissioning for cloud cost optimization.
- Agile methodologies, driving sprint planning, backlog refinement, and QBR alignment in tier-1 banking environments.
- Skilled in solving complex technology challenges using AI-assisted engineering tools (e.g., GitHub Copilot, Make, AIPOS) to connect DevOps, cloud, security, infrastructure, and application teams to deliver scalable platforms.

SKILLS & STRENGTHS

- DevSecOps & SRE Practices
- Cloud Platforms (Azure, AWS)
- Containerization (Kubernetes, Openshift)
- Observability (Prometheus, Grafana, Elastic)
- CI/CD Pipelines & (Azure DevOps, Github Actions)
- Infrastructure Automation (Ansible, Terraform)
- Scripting (Python, Shell) and Linux.
- Operational Resilience
- Application & Infrastructure Modernization
- Incident Management (ServiceNow)
- Risk Assessment & Governance
- Agile Methodologies & Leadership
- Cost Optimization & Decommissioning
- Stakeholder Management & Capability Development

PROFESSIONAL EXPERIENCE

EMPLOYER: HCL TECHNOLOGIES

ING

Amsterdam, Netherlands

DevOps & Platform SRE Specialist (Fraud & Cybersecurity)

August 2021 – Present

- Engineered custom Prometheus metrics, recording rules, and real-time dashboards in Grafana, Kibana, Splunk, and RTK Alerting to track HTTP 500 errors, endpoint availability, and error budget targets.
- Utilized ServiceNow (SNOW) for production incident triage, resolution coordination, and post-incident runbook updates to maintain application uptime SLAs.
- Participated in Threat Analysis and PEN Testing reviews, resolving critical security vulnerabilities prior to release cycles.
- Integrated CyberArk into 7 Azure Pipelines for dynamic credential provisioning, eliminating legacy SSH key risks and improving security risk scores.
- Optimized infrastructure spending by fully decommissioning legacy application stacks (RIAF/MD4 facilities), removing redundant Nginx configs, firewall rules, and idle networks.
- Developed "SQLRunner" via Azure Pipelines to automate database script migrations without direct server logins, reducing High Privilege Account (HPA) access.
- Automated weekly RHEL patching using Ansible and Azure Pipelines, and built Ansible-based "Service Status Overrides" to streamline BCM testing and change management.

ING

Bangalore, India

DevSecOps & Cloud Engineer (Contact Center Domain)

December 2018 – July 2021

- Led the DevOps Guild learning forum to foster cross-team learning, technical talks, problem-solving, innovation, and technical demonstrations.
- Designed Azure DevOps build and release pipelines integrated with Ansible playbooks for automated multi-environment application deployments.
- Ingested and structured application logs using Logstash and Grok filters to build operational Kibana dashboards.
- Led PKI certificate administration, vulnerability assessments, DRA/ITRMP risk evidencing, and annual Disaster Recovery (BCM) testing.
- Authored operational Runbooks, Network Diagrams, and Flow Diagrams to standardize deployment safety and incident resolution procedures.
- Managed cross-datacenter application migrations from legacy MD4 facilities to the IPC Cloud platform.

UBS

Bangalore, India

DevOps Coach & Platform Consultant

August 2016 – December 2018

- Standardized DevOps toolchains across engineering squads using Git, Jenkins, TeamCity, Nexus, Liquibase, and Docker.
- Provisioned customized Infrastructure as Code (IaC) deployments on AWS using Boto3, Python, and AWS SDKs.

Ericsson

Bangalore, India

Technical Lead

April 2014 – August 2016

- Managed a 15-member engineering team and applied LEAN methodologies to consolidate global labs, delivering \$800K in CAPEX cost optimization.

Juniper Networks

Bangalore, India

Technical Lead

September 2011 – March 2014

- Led feature, scale, and performance testing for EX series hardware using simulated VMware environments.

EDUCATION & CERTIFICATIONS

- **Education:** Bachelor of Engineering in Electronics & Communication, SJCE College, Mysore, India
- **Certifications:** AWS Certified Solutions Architect, CCNA, GitHub Copilot
- **Languages:** English (Fluent), Dutch (A2 Level)
