

Satisha Suryanarayana

Senior DevOps Professional

Amsterdam, Netherlands | +31 619263846 | ssatisha@gmail.com | LinkedIn: [satishas](#)

PROFESSIONAL SUMMARY

DevOps professional with extensive experience supporting critical financial applications in a continuously evolving technology landscape. Background in networking, software development, and testing, with expertise in infrastructure, automation, security, and operations.

Since last 8 years working in the Fraud and Cybersecurity domain at ING, leading initiatives in infrastructure modernization, automation, observability, compliance, and risk reduction. Experienced in working with stakeholders across networking, engineering, operations, and business.

Hands-on experience with Azure, AWS, Kubernetes, Red Hat Container Platforms, Azure DevOps, Ansible, CyberArk, Elastic, Prometheus, Grafana, Splunk, vulnerability management, IT controls, certificates, compliance, and data protection.

Have enjoyed solving complex technology challenges by using AI tools like GitHub CoPilot, make, AIPOS, in day to day activities to connecting DevOps, cloud, security, infrastructure, and application teams to deliver scalable, automated, and reliable platforms.

CORE CAPABILITIES

DevOps CICD | Azure DevOps /AWS | Risk Reduction | Automation (Ansible/Terraform)| Security Maturity & Governance | Observability | Stakeholder Management | Security & Compliance | Operational Resilience | Application & Infrastructure Modernization | Capability Development

EXPERIENCE

DevOps | ING | Amsterdam | Aug 2021

Department: Fraud and CyberSecurity

- Leading and delivering initiatives focused on infrastructure modernization, automation, security, operational efficiency, application monitoring, and risk reduction.
- Migrated applications from legacy/VM-based infrastructure to Red Hat Container Platforms, reducing infrastructure-related risk, operational overhead, and dependency on legacy environments.
- Supported decommissioning of legacy infrastructure following successful application migrations, reducing maintenance effort and infrastructure footprint.
- Automated weekly OS/software patching using Ansible and Azure Pipelines, enabling more frequent and consistent patching while reducing manual operational effort.
- Developed SQLRunner to automate controlled execution of database queries and changes through Azure Pipelines, reducing manual database logins and improving operational governance.
- Implemented Service Status Override automation to control application availability at machine and data-center level during BCM and maintenance activities, reducing manual logging and change-management effort.
- Addressed root/NPA usage risks by automating deployment of whitelisted RHEL aliases, providing required command capabilities without requiring users to switch to root.
- Integrated CyberArk with Azure Pipelines for dynamic credential provisioning, replacing SSH key-based mechanisms and strengthening credential security.
- Leveraged containerization to reduce security and operational controls associated with applications running on cloud VM infrastructure.
- Designed application monitoring dashboards using Elastic, Prometheus, Grafana and Splunk to provide proactive visibility into errors, endpoints, domains, server operations and customer-impacting areas.
- Implemented automated monitoring and alerting for GRP data-retention/deletion policies, strengthening compliance evidence and early detection.
- Overall outcomes: reduced manual effort and operational dependency; improved security; faster and more consistent patching; reduced legacy footprint; better auditability and compliance monitoring; improved observability and proactive incident detection; increased operational resilience; standardized automation.

DevOps | ING | Bangalore | Dec 2018 - Jul 2021

Domain: Contact Center

- Lead DevOps guild a learning forum for DevOps practices, Cross learning, tech talks problem solving, innovation and tech Demos.
- Analysed logs to create new fields using Logstash and grok filters for application-specific visualizations on Kibana dashboards.
- Implemented Microsoft Azure build and release pipelines and created Ansible playbooks for deployment scenarios.
- Performed OS periodic patching, vulnerability scanning and remediation, firewall rules, PKI certificate administration, monitoring of system metrics on Grafana, and annual DR activities.
- Supported DTAP asset creation on IPC Cloud, resizing, snapshots and firewall-rule implementation.
- Supported risk procedures, OSB, DPIA, DRA workshops, ITRMP evidencing and NPA monitoring.
- Performed shell scripting to test API endpoints and application interfaces.
- Migrated Twibel Merak application to IPC from MD4 DataCenters.
- Developed Confluence documentation covering security documents, SCAT test reports, penetration-test reports, release history, assets and certificate expiry.
- Conducted training/demo sessions within the squad for recent implementations and supported active adoption of tools.

DevOps Coach | ING | Aug 2016 - Dec 2018

- Implemented DevOps toolchains for CI/CD using GIT, Jenkins/TeamCity, Nexus, LiquiBase and Docker.
- Enabled SDLC adoption for DevOps, including migration to GIT, building/testing, code coverage and test coverage.
- Conducted workshops with project teams to introduce DevOps practices and designed project-specific DevOps toolchains.
- Deployed customized infrastructure-as-code (IaaS) on AWS.
- Technology landscape: AWS/Azure infrastructure, AWS SDK/APIs/Boto3, GIT, Linux/Windows, Java/Maven, TeamCity and SONAR.

Technical Lead | Ericsson | Apr 2014 - Aug 2016

- Owned the Ericsson SE-I&V program customer base with 28K chassis.
- Led a 15-member software testing team for SEOS CP/EP releases.
- Successfully migrated from CVS to a new GIT environment.
- Adopted LEAN methodologies for infrastructure optimization, resulting in \$800K CAPEX savings.
- Consolidated globally distributed labs into one lab in Jorvas, Sweden, without impacting ongoing CP/EP releases.

Technical Lead | Ericsson | Sep 2011 - Mar 2014

- Led a feature-testing team of 7 alongside individual technical ownership.
- Performed test design, CRUD, functionality, integration and scale testing.
- Owned functionality testing for image management, device discovery, port-profile provisioning/design, ping, reboot-device features and brownfield for EX devices.
- Performed performance and scalability testing for port profiles on VMware, simulating VMs.

Technical Certifications

- GitHub CoPilot
- AWS Certified Solutions Architect Associate
- CISCO Certified Network Associate

EDUCATION & LANGUAGES

- Bachelor of Engineering - Electronics & Communications, SJCE College, Mysore
- Dutch A2
- Languages: English, Dutch
